

# Transmission

DIRECTORY 2009

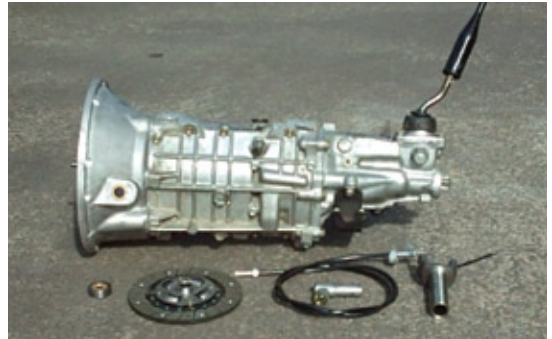

Most of you would be aware the transmission is a device that is connected to the back of the engine and sends the power from the engine to the drive wheels. An automobile engine runs at its best at a certain RPM range and it is the transmission's job to make sure that the power is delivered to the wheels while keeping the engine within that range.

It does this through various gear combinations. Thus it is of utmost importance to keep your car functioning in the right manner and because of the complexity it is recommended for the maintenance to be handled by experts in this particular field. To make your decision easier we have compiled a list of businesses that can assist you as below:

## DELLOW AUTOMOTIVE
